

## VALIDATION OF EMAIL ID

### TOOLS I HAVE USED:

- Eclipse/IntelliJ: An IDE to code the application
- Java: A programming language
- Git: To connect and push files from the local system to GitHub
- GitHub: To store the application code and track its versions
- Core Java concepts: Methods, collections, and strings

For this Program, I have some email IDs that are stored in an array.

From the List, the email ID that needs to be searched is entered.

If the email ID is found, it prints that the entered email ID is found at a particular position
